

WASHED-OUT CONCRETE WALLS

FULL SILEX CONCRETE PANELS – INSULATED SANDWICH PANELS

This extremely successful industrial concrete product has been in use for decades as a colour filler for business properties, office space and commercial premises.

Before the concrete is cast, the mould is pre-treated with a setting retarder that ensures that the concrete in contact with the mould scarcely hardens, if at all.

After stripping, the unhardened concrete mortar is washed away under high pressure to expose a granular texturing.

By using granules with different colours, this production process makes it possible to create a wider range of concrete wall colours.

Results for this production process can be improved still further by adding pigments to the concrete mix. This is particularly recommended for darker types of silex.

FULL SILEX CONCRETE PANELS

| | |
|------------------------|---|
| MAXIMUM LENGTH | 10 m |
| MAXIMUM HEIGHT | 3,8 m |
| THICKNESSES | 10 , 12, 14, 16, 18, 20 and 25 cm |
| STANDARD REINFORCEMENT | 5,5 kg/m |
| SPECIFICATIONS | inside surface levelled off by hand in a natural grey concrete colour outside surface stone colour according to customer specification |

INSULATED SANDWICH PANELS

| | |
|------------------------|---|
| MAXIMUM LENGTH | 6,5 m |
| MAXIMUM HEIGHT | 3,8 m |
| THICKNESSES | 18, 20 and 25 cm |
| INSULATION THICKNESSES | 40 to 80 mm in PS, PU and PIR |
| SPECIFICATIONS | inside surface levelled off by hand in a natural grey concrete colour outside surface stone colour according to customer specification |
